# 1. Welcome

## Turn your idea into a software product

Reimagine your business into a software-first business with our custom software design and development approach

We are a custom software development company delivering quality customized software solutions for the web and mobile. Our in-house development teams' design, develop, deploy and maintain software and aim at a predefined set of requirements.

Our software development cycle passes through several steps, including requirements gathering, ideation, architecting systems that support iterative releases, constructing clean and testable code, as well as quality testing process.

What differentiates our custom software development services from others is our scalable, robust software products built using quality engineering, approaches used to modernize apps, and adherence to agile and CI/CD principles throughout the product development life cycle.

## 2. Our Services

Aleria Technology is a digital product engineering and IT talent solutions company with a mission to solve complex software engineering problems. Since 2020, our team of 100+ experts has helped businesses elevate their value through our development services. # SOFTWARE DEVELOPMENT

## **Enterprise application software**

We customize enterprise-grade software to help businesses like you thrive in their business processes. This custom-designed software is targeted to your specific set of users and serves their unique requirements. Our in-house development teams customize, modernize and manage applications that accelerate your workflows. As a result, our products are easy-to-operate solutions that optimize and automate your business processes and give 100% satisfaction to the users. Our enterprise based custom software application development services include numerous apps.

## **Customer-centric apps**

We specialize in creating apps that stand out in providing personalized and interactive user experiences and represent a strong business identity among your target market. Embrace the flexibility of B2B and B2C customer applications that offer a wow-factor to your users with minimalistic design and quick responding features.

# BLOCKCHAIN SYSTEM

We believe in a future of fully remote work and a global economy with no borders. With today's technology, a location constraint is completely unnecessary. We're building tools to help the future of remote work. We believe in a decentralized future and are doing all that we can to accelerate the process. 1 line of code at a time. We help businesses like yours build beautiful, user-friendly blockchain apps - no technical knowledge required. We help you go from concept to launch .

## **Why are we different?**

- 1.) We have a unique interview process that has a large emphasis on the developer's soft skills.
- 2.) We have a 1 week free trial that allows you to test the developer in the best way possible.
- 3.) We have a very transparent pricing model; the price you see on the developer's profiles is the price you pay, no extra fees at all.

# BLOCKCHAIN SYSTEM

## **State-of-the-Art Technology Solutions**

We have over 3 decades of experience in delivering state-of-the-art, superior technology solutions to resolve the financial industry's most complex challenges.

## **Design Thinking and Approach**

Reimagining the vision for financial products and services using the first principle of design approach.

## **Integrated Project Management**

With experience managing large-scale systems deployment projects, combined with expertise in management consulting, we have the unique ability to deliver time sensitive fintech initiatives.

## **Managed Services**

Empowering financial institutions with skilled talent to ensure optimal business operations.

# PAYMENT SYSTEM

## **Payment API**

Seamlessly initiate wire payments from within your product. Your customers will never have to leave your platform for a money transfer ever again.

Built with love – for developers, by developers

We're a team of passionate engineers who obsess over sleek, robust, and flexible integration. We have made banking easy for you with simple integration and clear documentation guides to ensure that you can get up and running in no time

We can now make it possible for your users to top up directly from their bank, while displaying real time balances across all of their accounts.
